# Overview

This guideline provides a complete walkthrough of the **Floorplan Dashboard**, explaining its purpose, features, and user interactions from login to PDF export and floorplan management

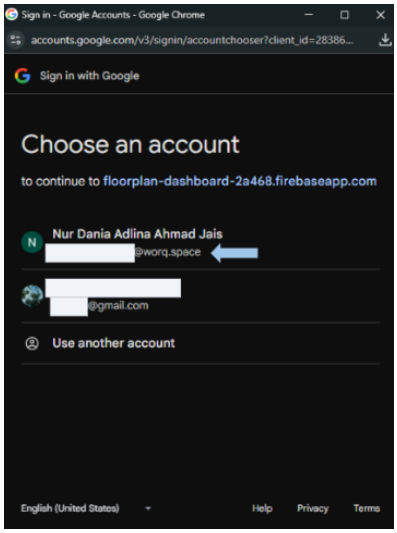

This page is the landing page of the Floorplan Dashboard.

## Login Access

- Access is restricted to users with a WORQ email address (`username@worq.space`).
- If you attempt to log in using a non-WORQ email, a notification will be displayed to inform you that access is not permitted.

### Google Sign-In Example

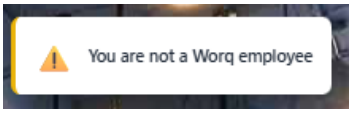

This example shows the Google Sign-In pop-up.
You may select your WORQ email account if it appears in the list.

- The email list usually appears automatically if your browser is logged in to Google (Gmail, etc.).
- If your WORQ email is not listed, click **“Use another account”** and sign in manually as usual.

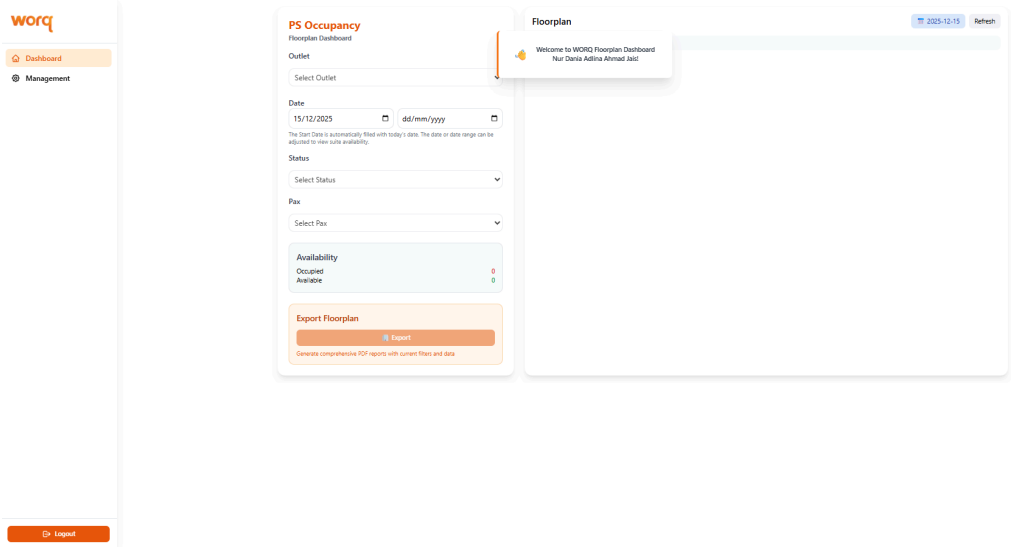

### Login Warning Notification

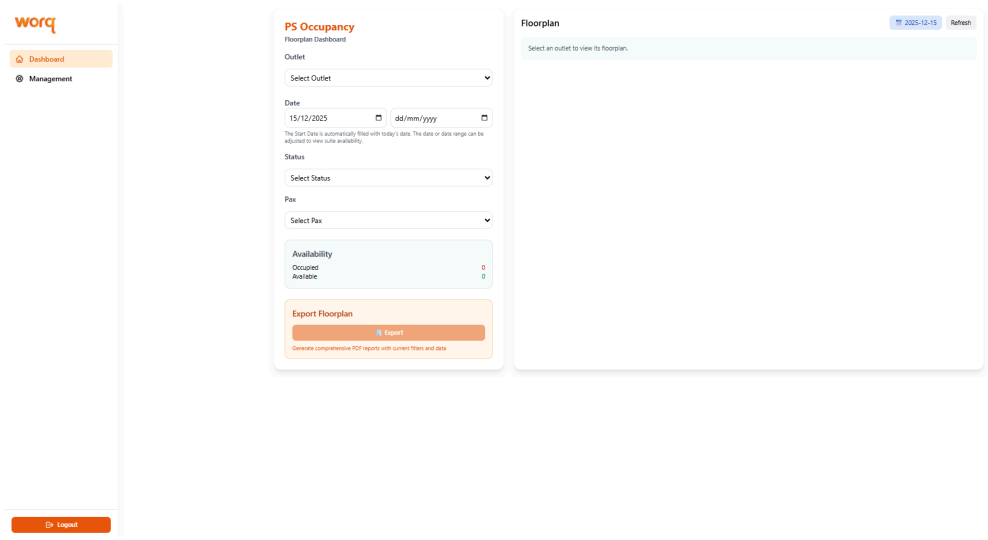

This notification appears when you attempt to log in using a non-WORQ email address.

Once you sign in using the correct WORQ email, you will be redirected to the Floorplan Dashboard, and a welcome notification will be displayed for a second.

# Dashboard Main Page

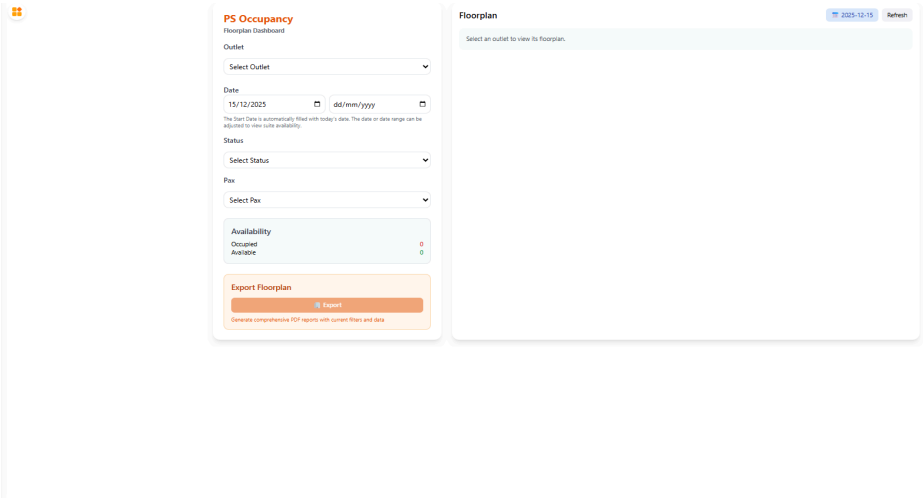

This is the main dashboard page.

On the dashboard, you will see:

- Sidebar (Navigation)
  - **Dashboard** – Main floorplan dashboard
  - **Management** – Floorplan management page (add or delete floorplans; additional features will be introduced in future updates)
  - **Logout** button at the bottom

When you click on the floorplan area, the sidebar will automatically collapse.
You can click the menu icon to reopen the sidebar.

- **Floorplan Dashboard Area** – Main workspace for filters, floorplans, and reports

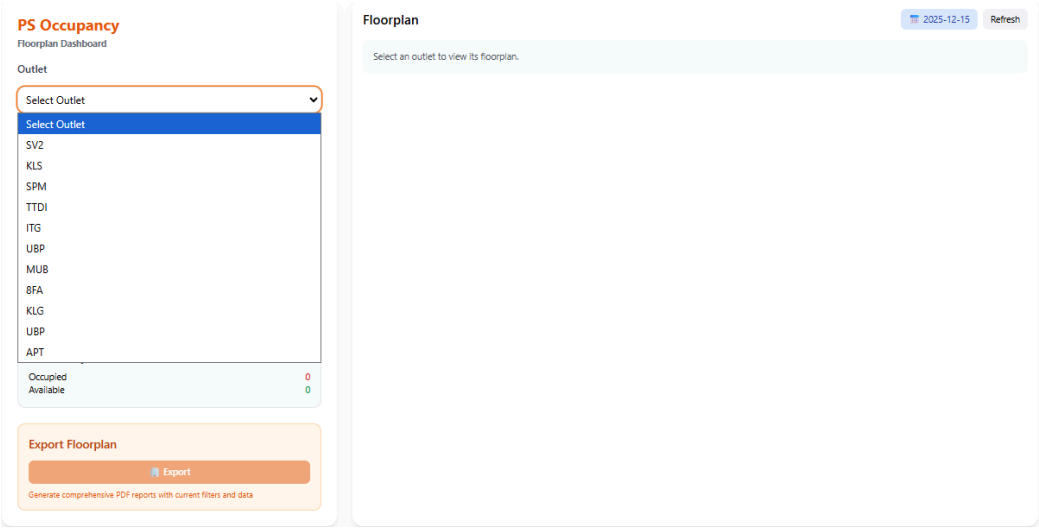

## Filters and Controls

The dashboard includes the following filters and components:

- Outlet dropdown
- Date / Date range selector
- Status dropdown
- Pax (capacity) dropdown
  Suite dropdown (appears after selecting an outlet)
  Floor dropdown (appears if the outlet has multiple floors)
- Availability table displaying the count of **Available** and **Occupied** suites (updates based on selected filters)
- **Export Floorplan** button to export selected data as a clickable PDF (including YouTube links and suite details)

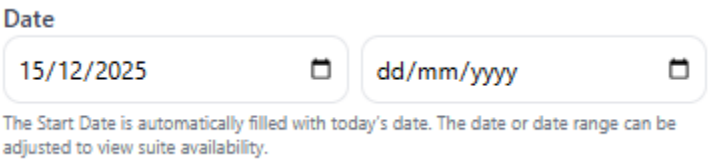

### Getting Started

To view floorplan availability, first select an **Outlet**.
Outlet names are retrieved from the database (BigQuery).

### Date Selection

- The first date field defaults to today's date.
- You may adjust the start date to view availability on a specific date.
- The second date field activates the date range, allowing you to select both a start and end date.

### Status Dropdown

Use this filter to display suites with a specific status.

For example:

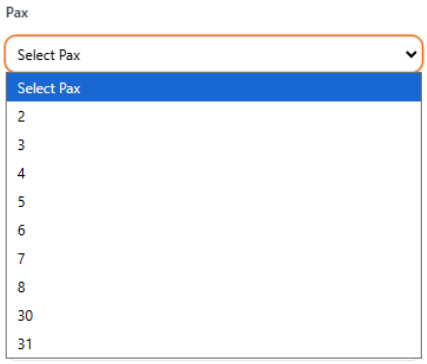

- Selecting **Available** will display only available suites on the floorplan.
- This filter also works together with the date selection.

By default:

- **Available** suites are shown in **green**
- **Occupied** suites are shown in **red**

When **Status = Available** is selected, the floorplan color scheme switches from availability colors to **Pax capacity colors**.

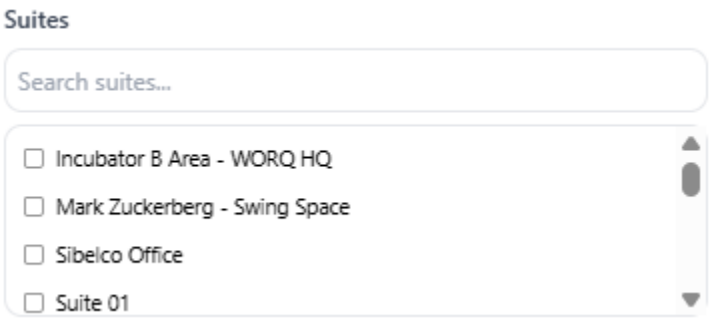

### Pax Dropdown

The Pax options are dynamically updated based on your previous selections:

- Outlet
- Date
- Status

### Suite Selection ( Displayed after selecting the outlet)

You can search for and select suites using the suite list.
The displayed suite names are filtered based on:

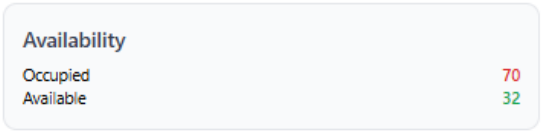

- Outlet
- Date
- Status
- Pax

Floor and Availability Table

**Floor Dropdown**
This option appears only when the selected outlet contains multiple floors.

**Availability Table**

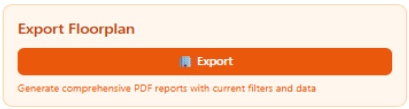

The Availability table displays the total number of:

- Available suites
- Occupied suites

The values update automatically based on the selected filters.

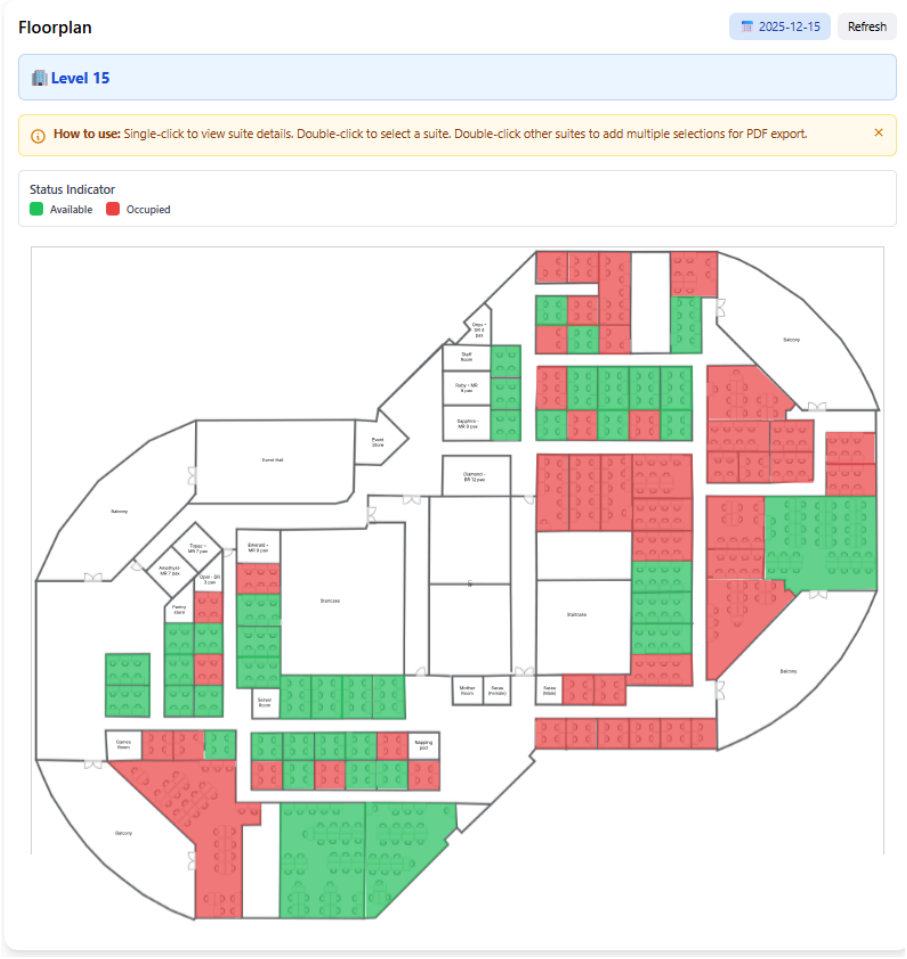

**Export Floorplan**

This function allows you to export your selected outlet and suites as a PDF.
The exported PDF includes clickable suites and detailed suite information.

# Floorplan View

The floorplan is displayed after selecting an outlet.
It updates dynamically based on the applied filters.

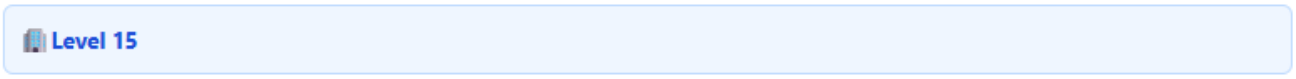

At the top of the floorplan, you will see:

- Selected date (single date or date range)
- **Refresh** button
- **Single Date** is shown by default.
- **Date Range** appears when an end date is selected.
- Clicking **Refresh** resets all filters and reloads the floorplan.

# Floor Label, Instructions, and Legend

### Floor Label

The floor label indicates which floor is currently displayed.
For outlets with multiple floors, the label updates as you switch floors.

### Instruction Panel

This panel provides guidance on:

- Viewing suite details
- Selecting suites

You may hide this panel using the close (×) icon.
Once hidden, it will remain hidden until you log out or perform a hard refresh (`Ctrl + Shift + R`).

### Legend

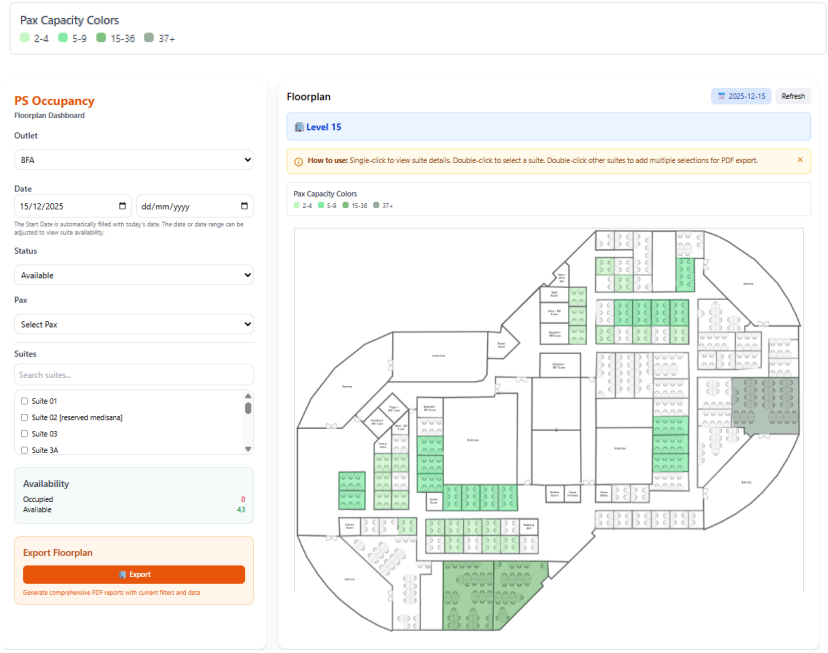

By default, the legend shows availability colors.
When Status = Available is selected, the legend switches to Pax Capacity Colors.

### Pax Color View Example

Below is an example of how the floorplan appears when **Status = Available** is selected.
The suite colors change from availability indicators to Pax capacity colors.

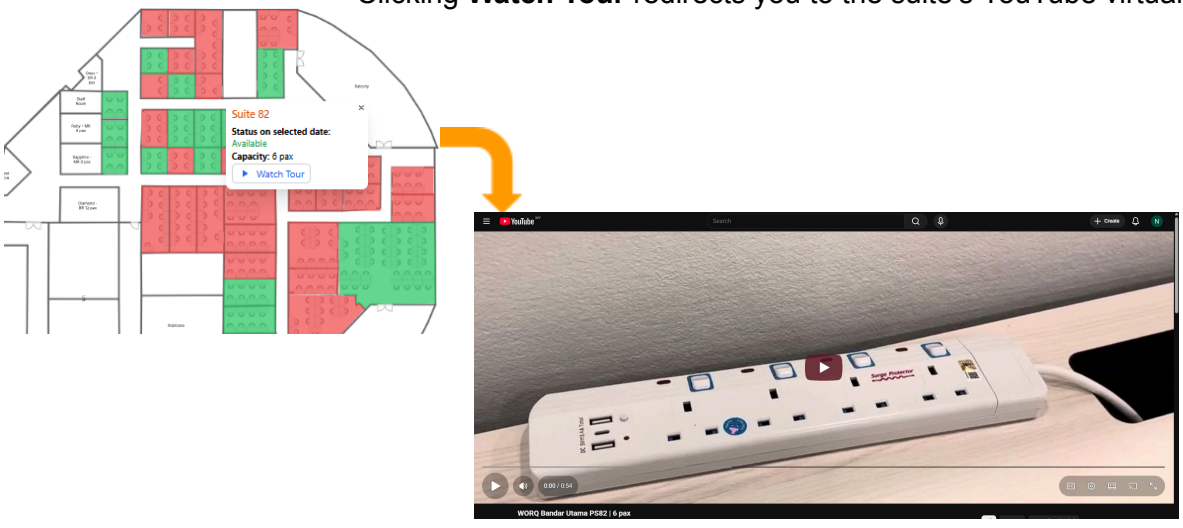

## Suite Popup Details

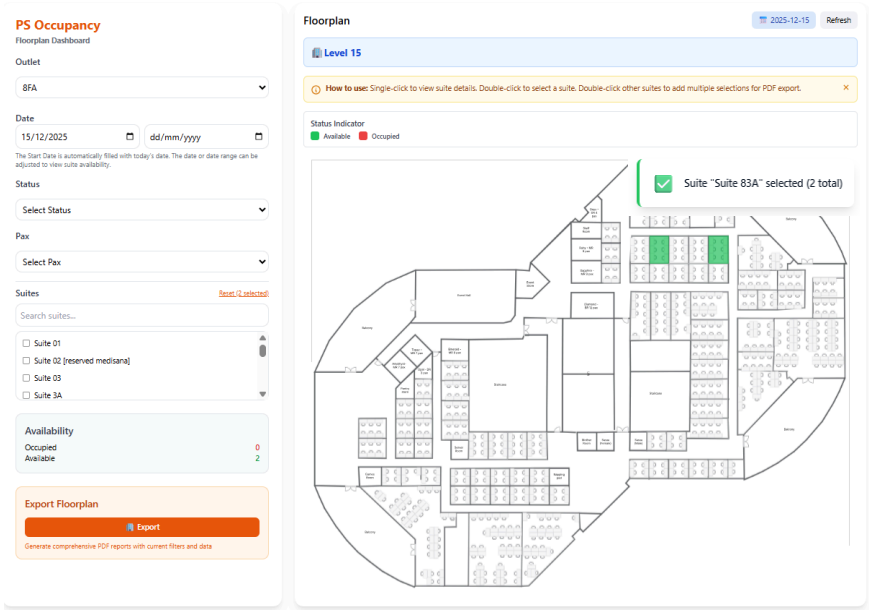

Clicking once on a suite opens a popup displaying:

- Suite name
- Status on the selected date
- Capacity
- **Watch Tour** button (if a YouTube link is available)

Clicking **Watch Tour** redirects you to the suite's YouTube virtual tour.

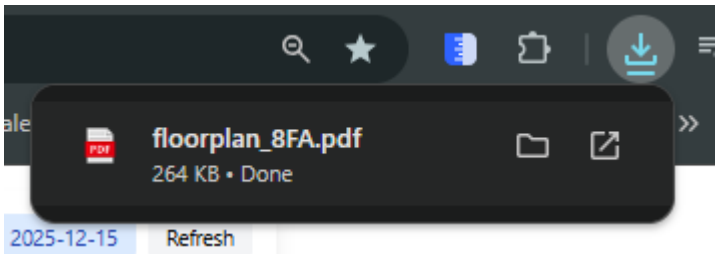

# Selecting Suites for Export

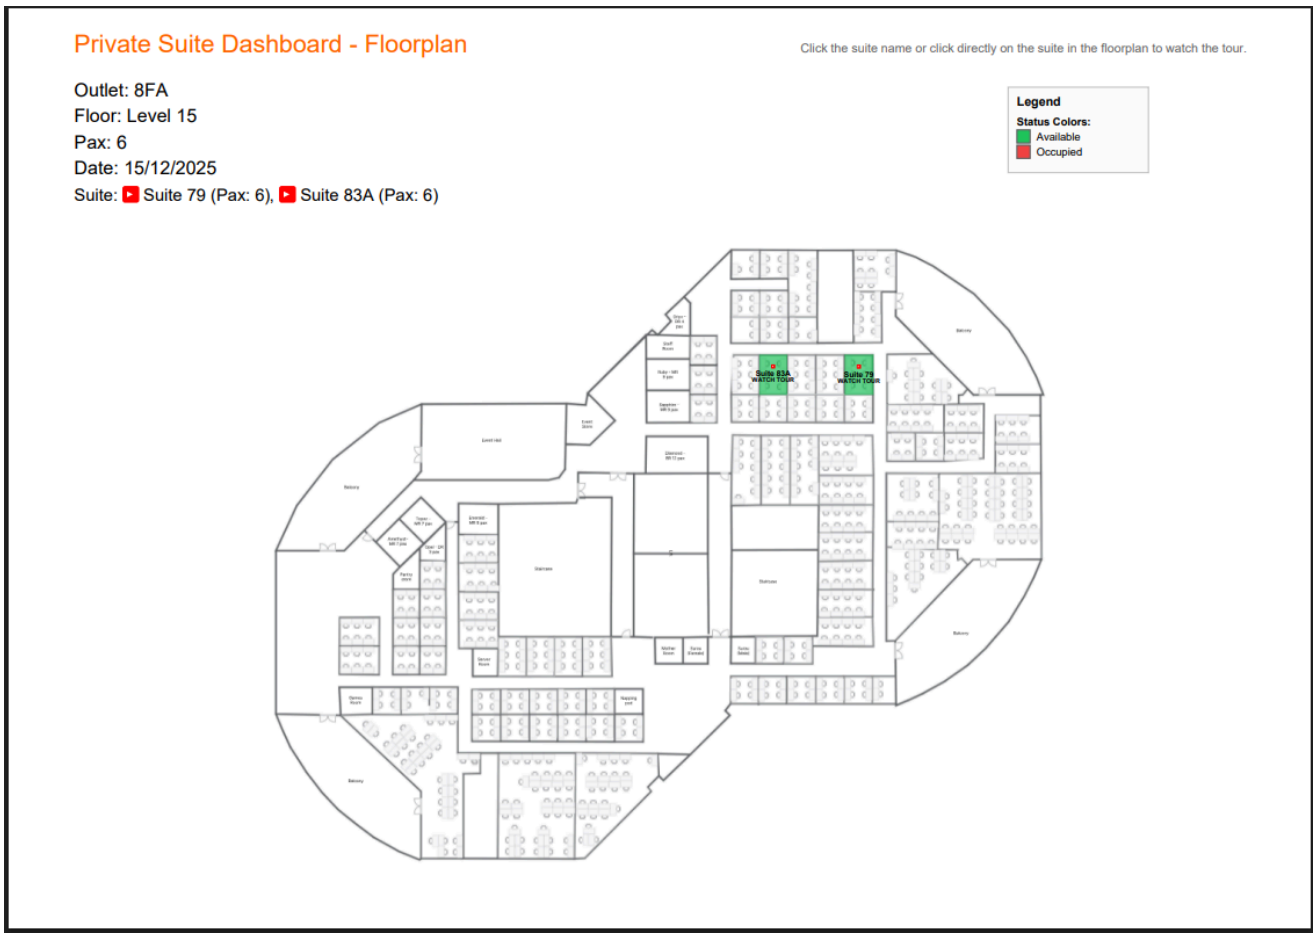

To select suites for export:

- Double-click on a suite in the floorplan.
- All other suites will fade out, leaving only the selected suites visible

Once selected, click **Export Floorplan** to generate a PDF.

**PDF Export – Default View**

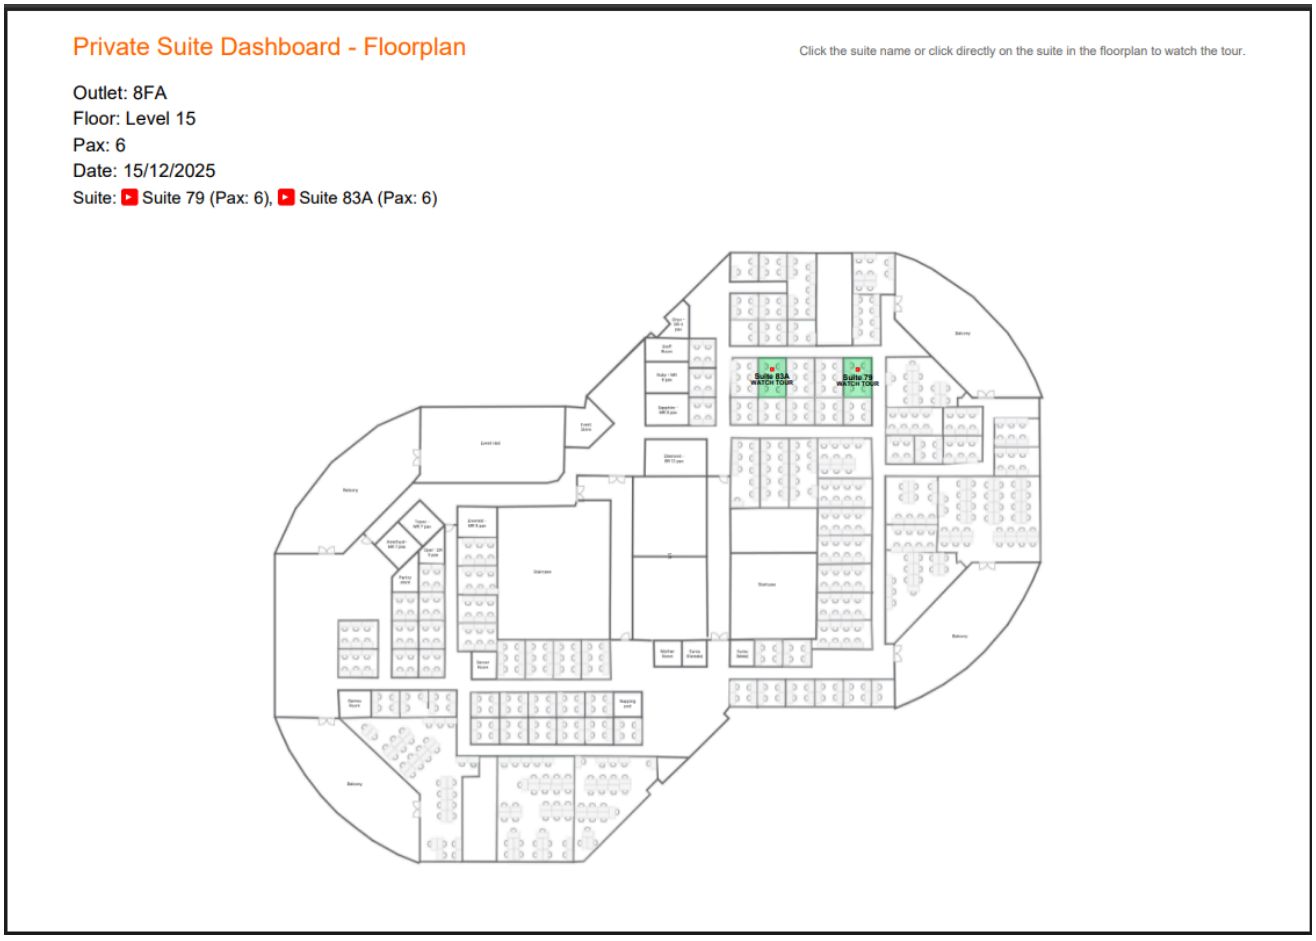

When exporting without selecting a status:

- The PDF displays the default availability colors.

The exported PDF includes:

- Outlet
- Floor
- Pax
- Date
- Suite name (with Pax shown when multiple suites are selected)
- Legend for availability status

**PDF Export – Available Status**

When **Status = Available** is selected:

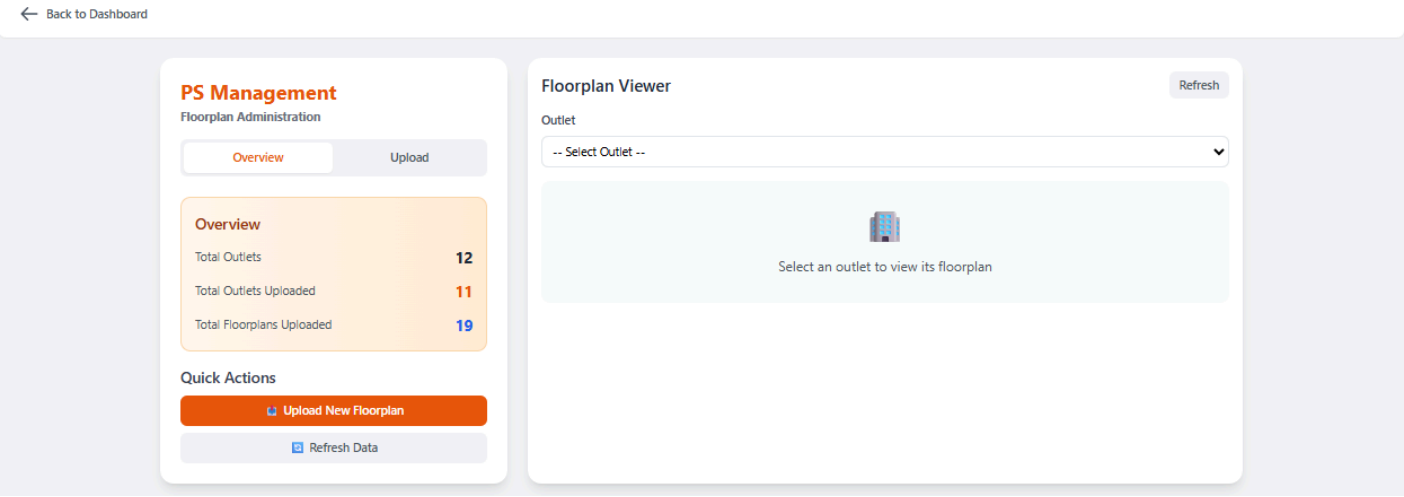

- The PDF reflects Pax capacity colors.

In the PDF:

- You can click directly on suites in the floorplan, or
- Click the YouTube icon in the suite details section

Both actions will redirect you to the suite's YouTube virtual tour.

## Management Tabs

The Management page contains two main tabs:

- Overview
  Displays summary statistics, including:
    - Total outlets
    - Total outlets with uploaded floorplans
    - Total floorplans uploaded

- Upload
  Allows users to upload new floorplans to the system.

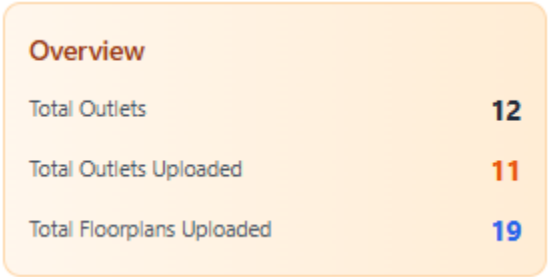

## Overview Section

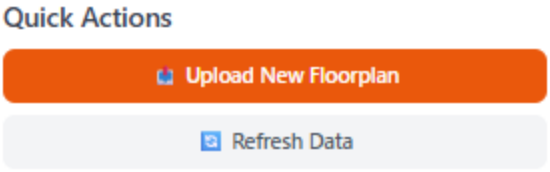

The Overview section provides a high-level summary of floorplan data.

This section displays:

- Total number of outlets
- Total number of outlets with uploaded floorplans
- Total number of floorplans uploaded

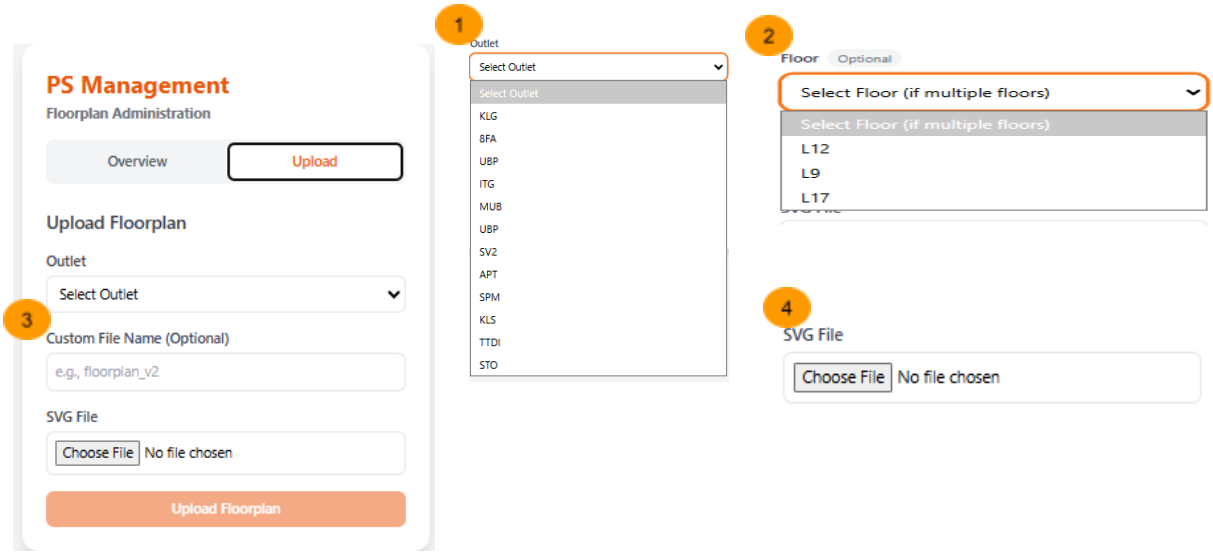

### Quick Actions

The **Quick Actions** section provides shortcuts for common tasks:

- **Upload New Floorplan** – Quickly navigate to the upload tab
- **Refresh Data** – Refresh the page to retrieve the latest data from the system

### Upload Floorplan

To upload a new floorplan, follow these steps:

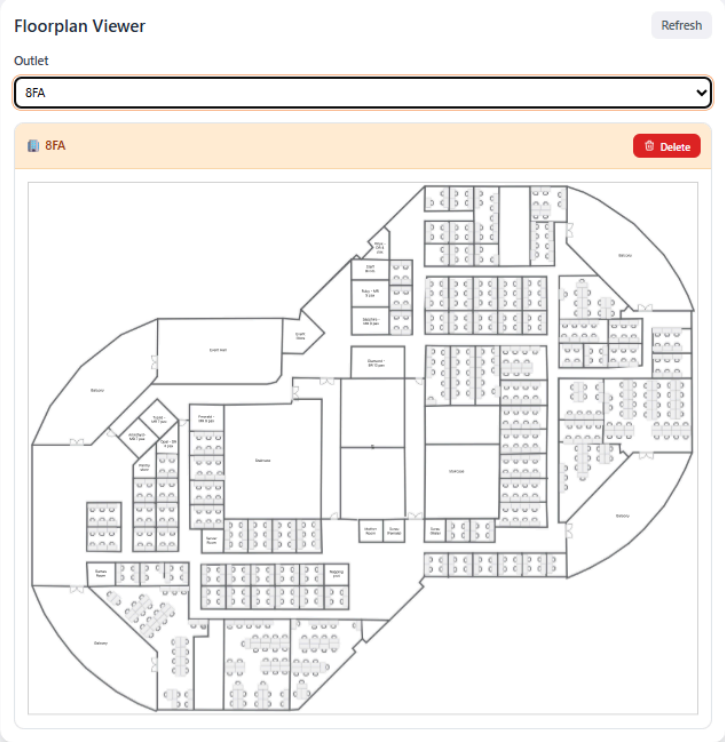

1. **Select Outlet**
   Choose the outlet where the floorplan will be uploaded.
   - All outlets are retrieved from the database.
   - Unlike the dashboard, this list is **not filtered** to only outlets with existing floorplans.

2. **Select Floor**
   - The floor dropdown is automatically filtered based on the selected outlet.
   - Select a floor only if the outlet has multiple levels.
   - Ensure you are uploading the floorplan to the correct floor level.

3. **Custom File Name (Optional)**
   - You may provide a custom file name if you want to save the SVG with a specific name.
   - If left empty, the system will use the default file naming convention.

4. **SVG File Upload**
    - Upload the SVG floorplan file created in Figma.
      The drawing process follows the **Floorplan Dashboard Project – Figma Drawing and Uploading Guideline**.

## Floorplan Viewer

The **Floorplan Viewer** section allows you to:

- Preview floorplans that have already been uploaded to Firebase Cloud Storage
- Delete an existing floorplan if required

After selecting an outlet:

- You can verify the uploaded floorplan visually
- You may choose to delete the floorplan if needed

⚠ **Important Note:**
Deleting a floorplan will remove **all floorplans associated with the selected outlet**.

**No Floorplan State**

If the selected outlet does not have any floorplans uploaded, the system will display a notification indicating that no floorplan is available for that outlet.
